

New Extraction Tool for QA's 100-05 Series Probes

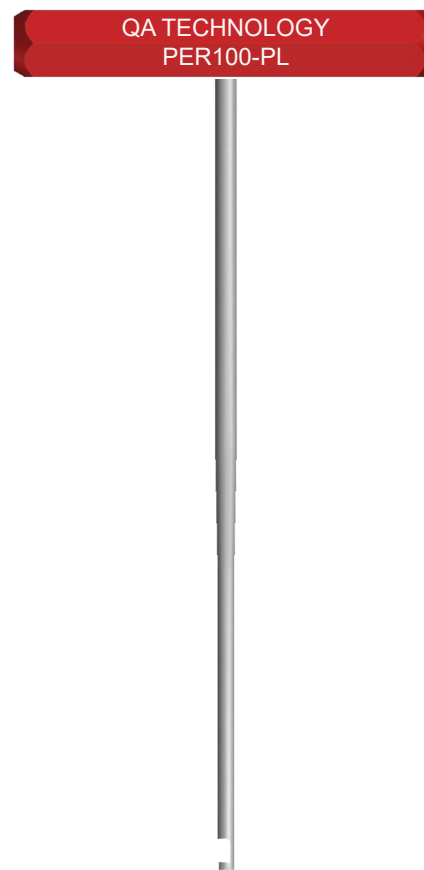

QA Technology is pleased to announce an expansion of our probe extraction tool selection by adding our new PER100-PL tool. This version offers a wider slot to hook under 100mil headed tips greater than $\text{\O}.055''$ [1.40mm] from their sockets to make it easy for you to remove 100-05 probes from your fixtures.

QA Technology tools allow easy replacement of a damaged or worn-out tip without having to return the tool for repair. If the tool becomes damaged, the replacement PER100-PL-TIP is available.

QA Technology products are trusted and specified by the world's most recognized technology companies and PCB test fixture manufacturers. Our customers know they will produce a higher quality product, meet delivery demands, and achieve higher production yields.
