

# New from QA High Quality Hand Wire Wrap Tools

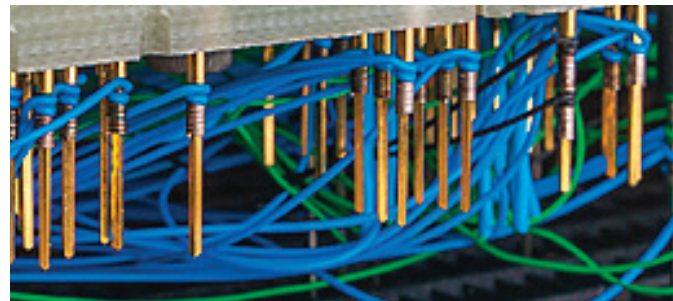

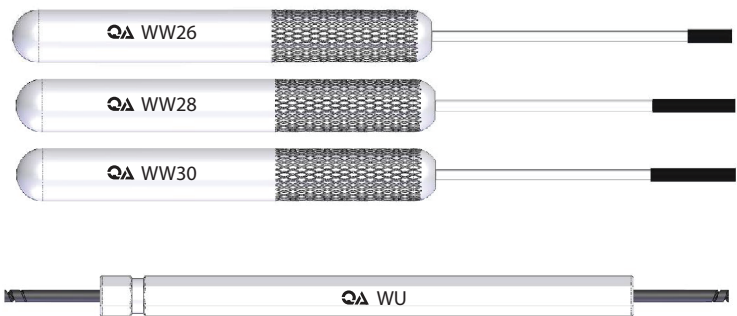

Wire wrapping is the most common wiring method for the larger center spacing sockets and termination pins. For the PCB professional who needs tools for low volume production, maintenance and field repair, QA now offers high quality hand wire wrap tools that are available for 26, 28, or 30 AWG wire sizes.

These new tools form modified wraps on standard 0.025" [0.635mm] square or round posts. Additionally, the P option can wrap pins up to 1.125" [28.584mm] long. Our unwrap tools are double ended to facilitate easy removal of both clockwise and counterclockwise wire wraps and are compatible with both the standard and long pin versions.

For 75mil and larger centers, QA recommends 28 AWG solid wire. For 50mil and smaller centers, use 30 AWG solid wire with additional insulation to prevent crowding or shorting between adjacent sockets. Multiple wire wraps can be used on pins longer than 0.250" [6.35mm].

Since 1981, QA Technology has been globally recognized for exceptional product performance, competitive prices, fast delivery, and outstanding service.

WIRE SIZE	WIRE WRAP TOOL PART NUMBER	
	STANDARD LENGTH (0.750" [19.1mm] Hole depth)	LONG PIN OPTION (1.125" [28.58mm] Hole depth)
26 AWG	WW26	WW26P
28 AWG	WW28	WW28P
30 AWG	WW30	WW30P
Unwrap	WU
